THE UNIVERSITY OF SYDNEY

CONFIDENTIAL EXAM PAPER

This paper is not to be removed from the exam venue

Mathematics and Statistics

EXAMINATION

Semester 1 - Replacement, 2018

MATH2921 Vector Calculus and Differential Eqs (Adv)

EXAM WRITING TIME: 2 hours

READING TIME: 10 minutes

EXAM CONDITIONS:
This is a RESTRICTED OPEN book examination - specified materials permitted

During reading time - writing is not permitted at all

MATERIALS PERMITTED IN THE EXAM VENUE:
(No electronic aids are permitted e.g. laptops, phones)

One A4 sheet of handwritten and/or typed notes double sided

MATERIALS TO BE SUPPLIED TO STUDENTS:
2 x 16-page answer book

INSTRUCTIONS TO STUDENTS:

Please tick the box to confirm that your examination paper is complete. ☐

For Examiner Use Only

Total _____

1. An inverted cone (without a lid) is to be made of a material such that the total volume of the cone is 1 L. What are the (exact) dimensions of the cone so that the surface area is minimised?

---

2. Consider the function on $[-\pi, \pi]$:

$$f(x) = \begin{cases} \frac{1}{2} & |x| < \frac{\pi}{2} \\ 0 & \text{else.} \end{cases}$$

(a) Compute the Fourier series of the even periodic extension of this function of period 2π.

(b) Use your answer in part (a) to compute an exact formula for

$$\sum_{k=0}^{\infty} \frac{(-1)^k}{2k+1}$$

---

3. Solve the following initial-boundary value problem:

$$u_t = u_{xx} \quad u_x(0,t) = u_x(\pi,t) = 0$$
$$u(x,0) = \cos(2x) + \cos(3x)$$

---

4. Find all real critical points of the function

$$h(x,y) = \cos x + \sin y$$

and classify them as local maxima, minima or saddle points.

---

5. Let $\mathcal{R}$ be the region in the (x,y) plane bounded by the x and y axes and the curves $y = \cos x$ and $x = \frac{\pi}{2}$. Find the (exact) centre of mass of $\mathcal{R}$ if the density is given as $\rho = x + y$.

---

6. Write the general solution to the following ODE

$$y'' + y = 2e^{-x}$$

turn to page 3

---

7. Calculate the work done by the force $\mathbf{F} = x^3\mathbf{j}$ in a moving particle around the regular hexagon with vertices at $(\sqrt{3}, 1), (0, 2), (-\sqrt{3}, 1), (-\sqrt{3}, -1), (0, -2)$ and $(\sqrt{3}, -1)$ oriented anticlockwise.

---

8. Let $\mathcal{S}$ be the part of the sphere $x^2 + y^2 + z^2 = 25$ between the planes $z = -4$ and $z = 4$, oriented with outward pointing normal. Let $f : \mathbb{R}^3 \to \mathbb{R}^3$ be the vector field

$$\mathbf{f}(x, y) = \left(yz + 2x, -xz + 4y^2, z^4 - 2\right).$$

(a) Draw a careful sketch of $\mathcal{S}$. Identify the boundary ∂S of S and indicate the positive orientation on ∂S induced by the outward orientation on S.

(b) Compute the curl of $\mathbf{f}$ and find the value of the surface integral

$$\iint_{\mathcal{S}} (\operatorname{curl} \mathbf{f}) \cdot \mathbf{n} \, d\mathcal{S}$$

---

9. Solve the following initial value problem:

$$u_{tt} - 4u_{xx} = 0 \qquad \begin{aligned} u(x, 0) &= \frac{1}{(3-x)^2 + 4x} \qquad x \in \mathbb{R} \\ u_t(x, 0) &= \frac{1}{1 + x^2} \qquad t \in \mathbb{R} \end{aligned}$$

---

10. Find the (exact) radius of the disk centred at the origin

$$\mathcal{D}_a = \left\{(x, y) | x^2 + y^2 \leq a^2\right\}$$

such that the surface area of the function

$$f(x, y) = x^2 + y^2$$

over $\mathcal{D}$ is equal to 1.

---

11. **Bonus:** Do not attempt this question until you have finished answering all the other questions on this exam. Tell me a joke.

This is the end of the examination paper
